

Komol Bunrueang

Computer engineering student and web developer

komolbunrueang@gmail.com
github.com/JorJamess
my-website.komolbunrueang.workers.dev

Year-two computer engineering student at Thammasat University. I like the moment code turns into something people use, and I build and ship small web apps for my own daily life. Next I want to learn how computer networks work.

Education

Thammasat University Expected to graduate in 2029

Bachelor of Engineering, Computer Engineering, year two

Projects

jameswebpupu 2026

A personal planner: calendar, notes and a money summary, at my-website.komolbunrueang.workers.dev

- Calendar, notes and quick capture; Claude can add events and notes through an MCP server I connected
- Runs on Cloudflare Workers with a D1 database; every push to GitHub deploys it
- Password login with a lockout after repeated wrong tries, and weekly backups
- Built together with Claude Code: I decided the features, reviewed each change and deployed it

Next.js, TypeScript, Cloudflare Workers, D1, MCP. Code: github.com/JorJamess/my-website

Expenses 2026

An income and spending tracker for my monthly money

- Transactions by category and wallet, monthly budgets and recurring bills
- Its own login, an MCP server for Claude, and a read-only API that feeds jameswebpupu
- Built together with Claude Code

Next.js, Cloudflare Workers, D1, MCP. Code is private.

Skills

- Python: the basics, not yet with libraries
- Java: up to recursion
- JavaScript: the basics
- Git: intermediate, used every day
- Used in my projects with Claude Code: Next.js, TypeScript, Cloudflare Workers and D1, MCP

Looking for

- An internship in summer 2027
- Freelance work: websites for shops and people, web apps and back-office systems
